

AML compliance for the UAE gold trade — one guided, inspection-ready workflow.

AurumTrace helps precious-metals dealers meet their DPMS anti-money-laundering obligations end to end: know-your-customer checks, transaction reporting, responsible-sourcing due diligence and goAML filing — turning a fragmented, manual burden into a single calm process.

DPMS

GOAML

KYC / CDD

RESPONSIBLE SOURCING

ENGLISH & العربية

THE CHALLENGE

Gold and precious-metals dealers must screen customers, value and record every dealing, judge which transactions are reportable, evidence where their gold came from, and file to the regulator — accurately, in two languages, and ready for inspection at any time. Done by hand across spreadsheets and emails, it is slow, error-prone and hard to defend.

ONE WORKFLOW · SIX STAGES

From counter to filing, every step guided and recorded

1

Intake & valuation

Capture the item and customer and value the gold live against the current market price — to AED precision.

2

KYC / CDD screening

Screen the customer against sanctions, PEP and adverse-media lists and score their risk automatically.

3

Threshold check

Detect reportable transactions and aggregate linked dealings so nothing that should be reported is missed.

4

Responsible sourcing

Record OECD five-step supply-chain due diligence and store supporting documents, encrypted.

5

goAML report

Generate a ready-to-file goAML report draft for the compliance officer to review.

6

Audit trail

Every action is captured in a tamper-evident, inspection-ready record of who did what, and when.

WHAT IT DOES

Capability at a glance

Live gold valuation

Every item priced against the current market rate, computed in exact minor units — no rounding drift.

Automatic reporting threshold

Flags cash transactions at or above the reporting threshold and aggregates linked dealings automatically.

Sanctions & PEP screening

Checks customers against UN, OFAC, UK, EU and UAE local lists, plus adverse-media scanning.

Encrypted document vault

Identity documents and source declarations stored with bank-grade encryption.

Bilingual & inspection-ready

Full English and Arabic with right-to-left layouts — built for the counter, the officer and the auditor.

Human-in-the-loop filing

AurumTrace prepares the report; a compliance officer always reviews and files. Nothing is submitted automatically.

BUILT FOR TRUST

Defensible by design

- ✓ **Per-dealer data isolation** — enforced in the database itself, not just the app, so one dealer can never see another's data.
- ✓ **Encrypted end to end** — documents encrypted at rest, all traffic secured in transit.
- ✓ **Tamper-evident audit log** — cryptographically chained; historical records cannot be altered or deleted.
- ✓ **A human decides every filing** — no automated submission to the regulator, ever.
